

BAT50 Battery Asset Tracker

The BAT50 is an asset-tracking device designed to provide the user with a once daily locate. It does not function on any of the Vehiclepath continuous-tracking rate plans.

The unit is specifically engineered to report every 24 hours and then go back to sleep, enabling this self-contained battery-powered device to last a minimum of 1-year on a single battery.

The BAT50 can be affixed to any asset to provide intelligent monitoring of non-powered mobile and fixed assets. Like all Vehiclepath products, it can be a part of a universal solution, mixed with our continuous-tracking devices and visible utilizing the same web-based software. The device communicates using the AT&T Wireless GPRS data network.

The BAT50 is water-resistant pursuant to the IP-66 code rating, which specifies that the device is protected against dust and high-pressure water jets. Because it is designed to be exposed to the environment, the GPS and cellular antennas are completely integrated.
