

## VP500 Vehicle Tracking Device

### FLEET TRACKING DEVICE WITH SUPERIOR GPS TECHNOLOGY

The ultra-sensitive GPS-based VP500 fleet tracking unit is unrivaled in its class with next generation Super-sense GPS technology at an economical price.

Designed for standard AVL applications, the VP500 incorporates GSM wireless communication and Super-sense GPS in an affordable package. It's built with quality components to meet the high reliability requirements of always-on tracking. Match this with high-sensitivity GPS and the internal antenna option for easier and less expensive installs. The VP500 is a robust fleet device you can count on for simple AVL applications.

Configuration parameters and firmware can all be updated over the air. Our web-based maintenance server, PULS™, offers out-of-the-box hands free configuration and automatic post-installation upgrades. You can also monitor unit health status across your customers' fleets to quickly identify issues before they become expensive problems.

- High Sensitivity GPS (-160dBm)
- Voltage Monitoring and Low Battery Notification
- Over-the-air firmware upgrade
- 5,000 Buffered Messages
- GSM Quad Band (850/900/1800/1900 MHz)
- Comprehensive I/O, 5 inputs and 2 outputs
